You can either use a "bright" lens or turn up the ISO. A "bright" lens is one that is capable of obtaining an aperture between f/1.4 to f/2.8. When using apertures this low, it allows you to obtain fast shutter speeds at lower ISO's. When you're forced to use higher ISO's, your images will be greatly affected by image noise (grain).

1. I use Av, Tv, and M modes, depending on what I'm doing. When I'm using external lighting of some sort, it's always M mode for me. When I'm shooting outdoors in natural light, I'm usually more interested in controlling the depth-of-field and shoot in Av mode. When I shoot sports, I use either Tv or M. 2.

All dSLR cameras use CMOS sensors and they generate a lot of heat. For this reason, the camera will shut off to prevent damage to the sensor. This can vary, but usually three to four minutes is the maximum time you can record in one take when shooting at Full HD video (1080p) If you shoot from a script, you will not have to worry about shooting longer than a few minutes at a time in any case
