The early w/c Italsistem were used the A/c crank cases and they had problems with the barrel stud spacing as they were inside the water jacket O-ring so tended to leak. They did a revised engine with the cylinder studs outside the water jacket O-ring which clamped everything together better. I used to run Italsistem and in its day the MV21 was an awesome motor.

This wiki has been created to help pull together knowledge on kart engine/carburetors, kart chassis and to give people information on parts/maintenance of these. My aim is to get information in a central place, there is so much knowledge out there, if it's not documented it will eventually be lost.

Kart shops can check out an engine for you to see what condition it's in, how much life is left in it and how much power it's putting out. Chassis are a bit trickier. Sometimes, you just have to get it on a track with an experienced driver in the seat to know, but if you check the basics, that'll be a lot of your work done.
